ASSESSMENT TOOL 2 – CASE STUDY

Course Code:	CSA06	Course Title:	Design and Analysis of Algorithms
CO Assessed:	CO3: Articulation (BL4, BL5)	Assessment:	Assessment Tool 2 – Case Study
Weightage:	20% of CIA	Total Marks:	100
CO3 Statement:	Design Divide and Conquer algorithms for Merge Sort, Quick Sort, Binary Search and Matrix Multiplication		
Student Name:	J Venkata Varun	Reg. No.:	192372227
Section / Batch:	AI	Date:	12-08-26

Instructions to Students

- Answer the following question. Total Marks: 100.
- Carefully analyze the given case study questions.
- Explain in detail with sample code if needed.
- Clearly identify all key issues, provide an in-depth analysis, and propose innovative, feasible solutions with strong justification.

Question Type	Focus Area	Questions
Case Study	An e-commerce system dynamically updates product prices and must frequently sort them for display. Analyze how Quick Sort can handle real-time sorting. Identify issues such as pivot selection and uneven data distribution. Apply divide and conquer techniques to explain the process. Analyze performance and propose optimizations with justification.	Q1

SECTION A – CASE STUDY

Code of Conduct

I _____ (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: _____

RUBRICS FOR CALCULATION

Case Study					
Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Case	25%	Thorough understanding; clearly identifies all key issues	Good understanding with most issues identified	Basic understanding; some issues missed	Poor understanding; problem not identified correctly
Application of Concepts	25%	Effectively applies relevant concepts to analyze the case deeply	Applies appropriate concepts with minor gaps	Limited application of concepts	Fails to apply relevant concepts
Analysis	20%	In-depth analysis with strong reasoning and insights	Good analysis with logical reasoning	Basic analysis with limited depth	Weak or no analysis; lacks reasoning
Solution Design	20%	Innovative, feasible solutions with strong justification	Logical solutions with adequate justification	Basic solutions with weak justification	Incorrect or no solution provided
Clarity	10%	Clear, well structured, and easy to understand	Organized and understandable presentation	Limited clarity and structure	Poor clarity; difficult to understand

Marks Evaluation:

Criteria	Wt.	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Case	25%				

Application of Concepts	25%				
Analysis	20%				
Solution Design	20%				
Clarity	10%				
Total Marks (100):

1/1 answered

ASSESSMENT C03/AT2 CASE STUDY

Dynamic Pricing Engine (Quick Sort)
100 marks

An e-commerce system dynamically updates product prices and must frequently sort them for display. Analyze how Quick Sort can handle real-time sorting. Identify issues such as pivot selection and uneven data distribution. Apply divide and conquer techniques to explain the process. Analyze performance and propose optimizations with justification.

Your Code

```
import sys
data=list(map(int,sys.stdin.buffer.read().split()))
n=len(data)
def quicksort(arr):
    if len(arr)<=1:
        return arr
    pivot=arr[n//2]
    less=[x for x in arr if x<pivot]
    equal=[x for x in arr if x==pivot]
    greater=[x for x in arr if x>pivot]
    return quicksort(less)+equal+quicksort(greater)
print(quicksort(data))
```

Input

8
58 39 34 28 28 39 39 39

Output

28 28 34 39 39 39 39 58
